

A hand-drawn mind map on a light-colored background. The central node is 'INFORMATION' in a circle. It branches out to several other nodes: 'GUILT' (circle), 'EXPECTATION' (circle), 'PROCEDURE' (circle), 'TEMPs' (circle), 'Lack of baby dosages' (text), 'Forms' (text), 'Appard Score' (text), 'Repetition of info' (text), 'Difference in ma literacy process' (text), 'Figuring things out between medical team on the fl' (text), 'Keeping the baby @ the bedside for longer' (text), 'Checklists' (text), 'Rushed' (text), 'Loss of control?' (text), 'BIRTH PLAN' (text), 'Attempt to' (text), 'Introductions of medical team' (text), 'ing of situation some by' (text), and 'FEAR' (circle).

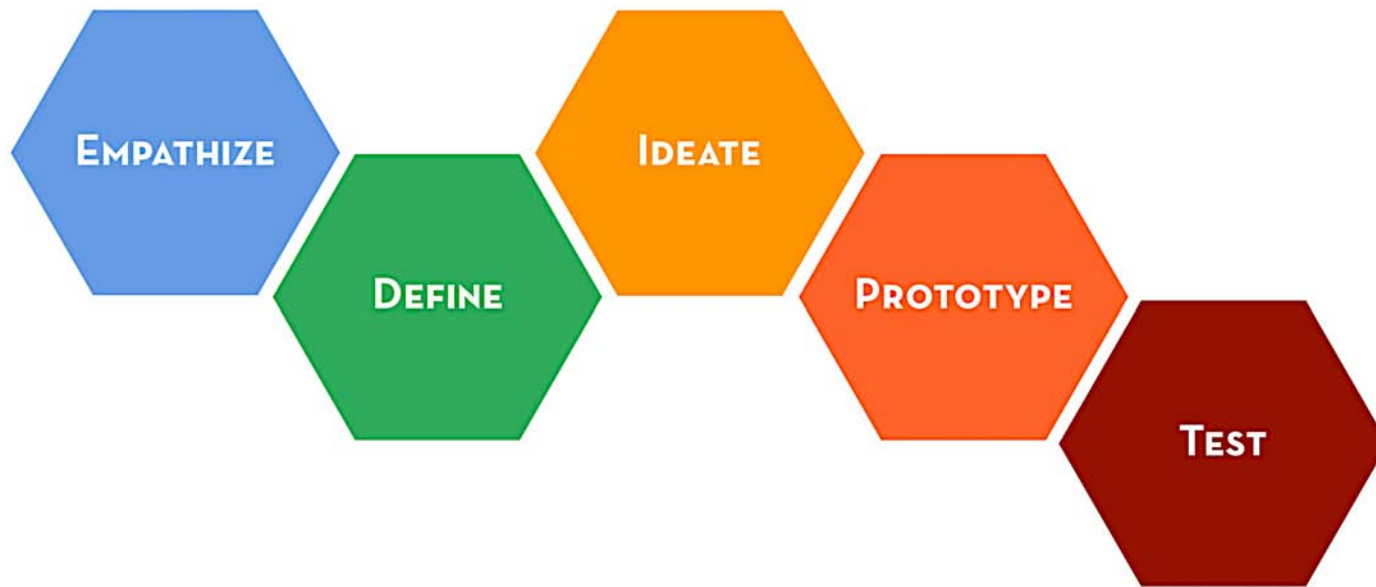

DESIGN THINKING FOR HEALTH CARE

Design Thinking: An Overview

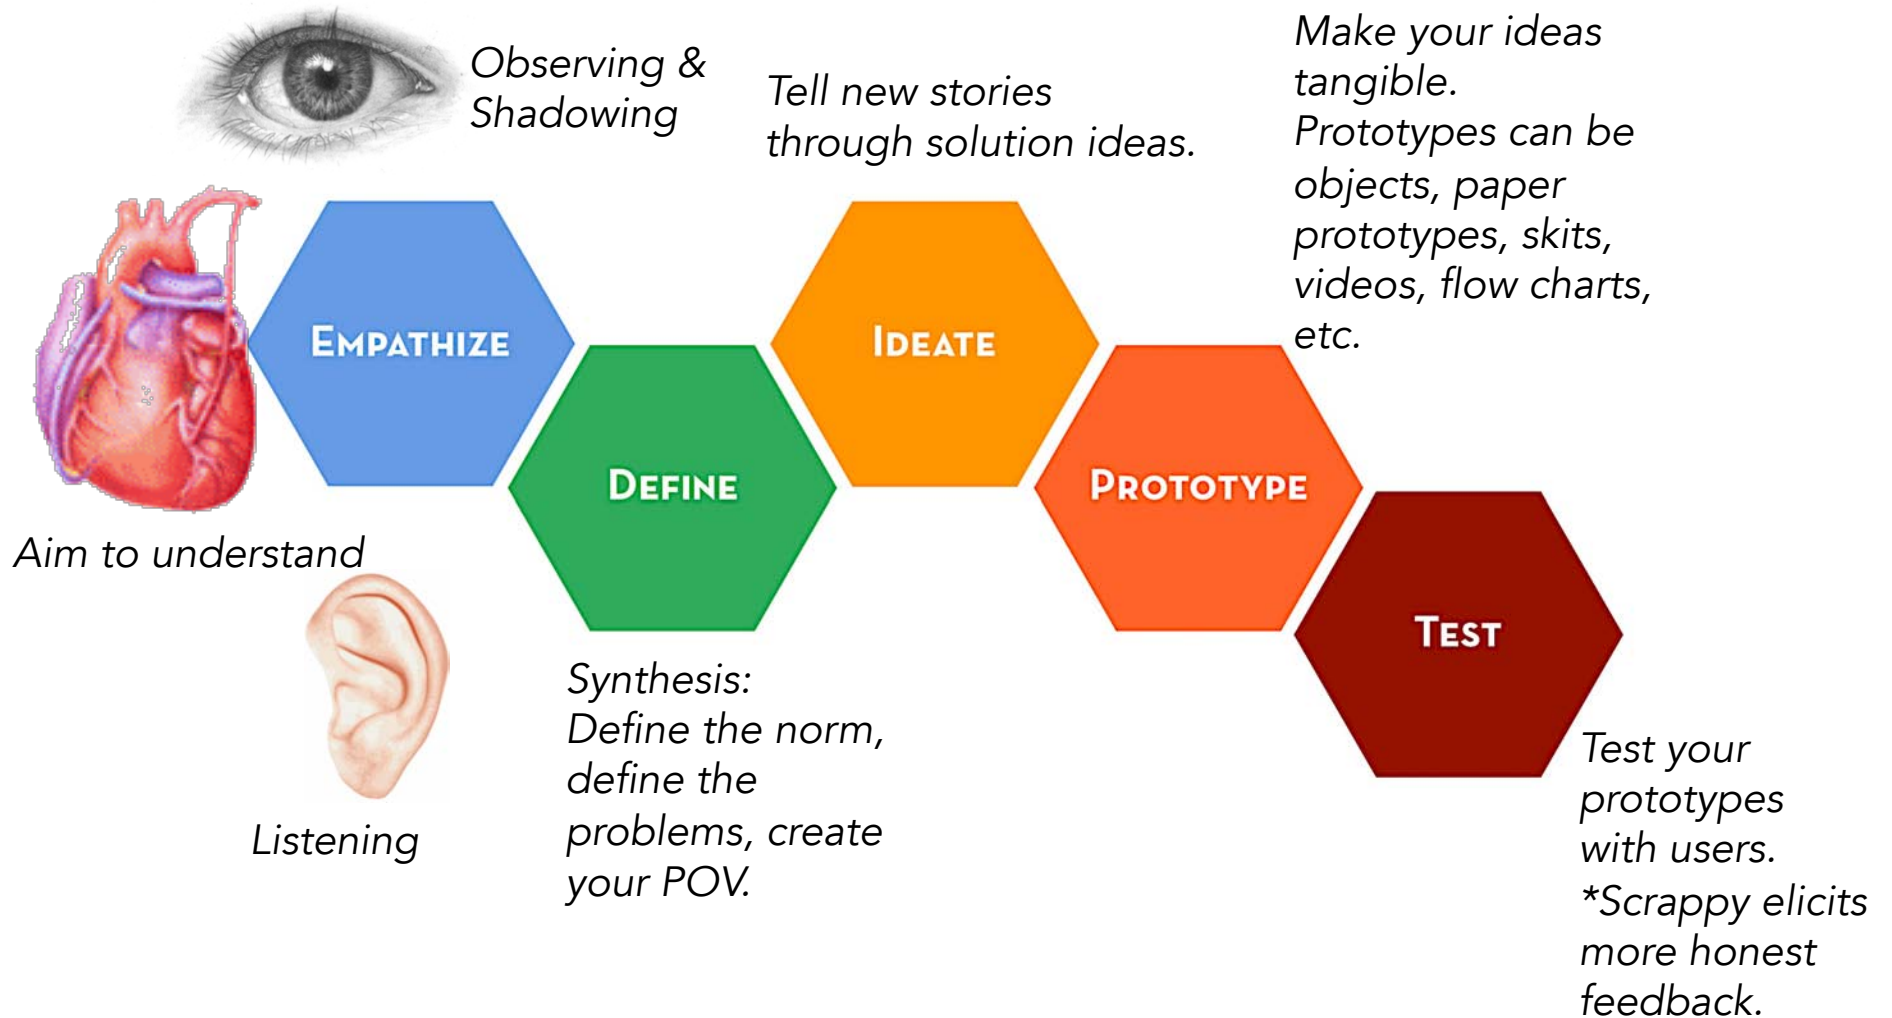

Jules Sherman, M.F.A.

www.redesignhealthcare.org

Human Centered Design Paradigm

Human Centered Design Paradigm

A designer 'needfinds' or works to understand a user's experience by learning about their lives. Empathy gaining and needfinding may be broken down into three discrete methods:

Immerse (environment)

Engage (interview)

Observe (shadow/watch)

Observe

Engage

Interview

Need statement:

USER needs X because Y ← ^{emotional components}

In their own words: New mothers

Words

"I wish I knew that I should have done something before he had to make breastfeeding easier. It really hurt when my nipple tip bled."

Johanna M.

"I almost threw up while in labor because I just ate a hamburger right before - which is probably not recommended. But hey, having a baby is like running a marathon. Gotta treat yourself a bit."

Olivia's mom

Feelings

- Regret at being unprepared.
- Frustration when she had trouble feeding her baby. → worried about malnourishment.

• Inconvenience, annoyance of the temporary pain.

• justified for being indulgent, after all, 9 months of abstinence from junk food is a long time.

• Grossed out from the hospital food that she felt compelled to have her husband drive out to buy a burger.

Words

"There's a photo of me in my mother-in-law's foyer of showcasing my huge, braless boobs while I'm hanging onto my newborn for dear life... Yes, I know it's about the baby, but when there is a photo involved, it's about me too."

Mother on the their. cafemom blog

"If your 'real' doctor doesn't deliver you, you sort of don't care anymore. You just want the baby out & whoever is going to make that happen, your partner, a nurse, or even a f*cking janitor - seems perfectly fine."

Feelings

• disappointed about her sudden intrusion of privacy.

• Self-conscious about her image on camera & preferred that her family members acted with more sensibility.

• feels grossed out about how she looks right after birth.

• When she is in pain (b/c she's pushing a human) being out of her body, she gets urgent and irrational. Anything goes as long as it ends the process.

• indifference toward OB credentials in the critical moment.

• annoyance with anyone/anything that could make her situation more difficult.

So I feel like if you can be in
best of all worlds. So that's v

INT: So you mentioned on your fir
happening there. Did they giv

The goal of the empathy mode is to discover gaps in between what people do and what people say they do. These gaps are the design opportunities.

Insight:

The capacity to gain an accurate and deep understanding of a person or thing.

The leap from observation to insight requires inference.

Look for tensions, contradictions and surprises. "I wonder if this means..."

A metamorphosis of your understanding.

What is a need?

- A physical, psychological or cultural requirement of an individual or group that is missing or not met through existing solutions.
 - Users typically cannot articulate what's missing.
 - Our process is as much like detective work as research.
- looks broad and deep
-infers models to explain
-identifies gaps and inconsistencies

Embrace® Case Study

"Each year, 15,000,000 babies are born preterm; 3,000,000 babies die in the first 28 days of their life. This is largely due to poor healthcare available in developing countries. Many of these deaths are preventable. Unfortunately, a prevalent number of hospitals simply cannot afford the high cost of current incubators and are in dire need of a low cost alternative. **In addition, many of these births occur in rural areas, where electricity may not even be an option so a sustainable solution is needed.**"

USE: Keeping baby warm after birth while realistically considering the time a mother has and cultural norms.

USABILITY: Mom has limited time because she has to get right back to work after birth, and she feels uncomfortable being exposed around family and co-workers making it difficult to breastfeed and have skin-to-skin time with her baby.

MEANING:

Problem 1) Mom has limited time because she has to get right back to work after birth.

Meaning: The needs of new mothers and babies may not be understood and/or prioritized due to the culture.

Problem 2) Mom feels uncomfortable being exposed around family and co-workers making it difficult to breastfeed and have skin-to-skin time with her baby.

Meaning: Modesty is prioritized (no matter what) due to social norms.

SOLUTION:

SOLUTION:

SOLUTION:

What is an interview?

- Semi-structured
- A field guide is developed and used, but interviews are flexible and feel like conversations.
- Respondents should do 80-90% of the talking.
- Encourage storytelling, get failure and success stories.
- Ask simple or naïve questions that often start with “what, how, who, or why?” or “tell us about...”

A persona is a user archtype you can use to help guide decisions about product features, navigation, interactions and visual design.

Personas are Beneficial For

- Defining a specific user's goals and needs
- Giving design teams a focus with a common understanding
- Identifying opportunities and product gaps to drive strategy
- Concentrating on designing for a manageable target who represents a larger group
- Helping designers empathize with users to understand behaviors, motivations and expectations

Name: Danika

Age: 36

Occupation: Paralegal and law student.

Pregnancy History: Pregnant once before, ended in pre-term birth at 22 weeks, baby did not survive.

Health Insurance: Medicaid (through PPACA or "Obamacare").

Lifestyle: Works full time, law school part time at night and weekends.

Diet: Mostly fast food, and packaged food.

Exercise: Walks from home to train station 5 days a week (.5 mile total distance).

Habits: Alcohol consumption every weekend, drinks soda and coffee daily.

Psychological Profile: Has struggled with anxiety on and off during her life. After the death of her baby, she did not receive any therapy and did not seek therapy. Peer support wasn't offered at the hospital.

Home Relationships: Lives with partner who shares similar lifestyle traits, and his mother.

Social Life: Has a few close friends and her sister who she regularly sees on weekends.

Personal Goals: Trying to get pregnant with a healthy full-term baby again ever since the death of her first child 11 months ago.

Professional Goals: Wants to become a family attorney within 4 years.

Typical Day:

Danika wakes at 6am, walks to the train .25 miles from her home, walks to her office across the street and begins work at 8am. She sits most of the day, getting up from her chair only to file papers. Food is ordered into the office. She typically eats tacos or burgers for lunch with soda. She leaves work at 5:30pm, grabs a sub sandwich or "Panda" Chinese food and rushes to get to school by 6:30pm. She stays at school for classes until 9:00pm and takes the train home. At home she has snacks like pretzels, chips or yogurt covered raisins, watches her favorite shows and then goes to bed around at 11:30pm.

Based on the above persona, Danika may need (inferring here):

- 1) Information about becoming pregnant after the loss of a pre-term infant.
- 2) Support post discharge from clinicians and peers about what she experienced in the NICU.

What else could you infer Danika might need to reach her healthy pregnancy goal?

DEFINE

Reframe

I feel so bloated

Chaotic

crowded state

It hurts to pee! Help

I feel fat / ugly

How is my baby?

Where's the doctor?

I don't want hospital food

Is my baby ok?

Worried about baby
Shouldn't use the pill
Am I doing this right?
This kind of this!
Want to see & hold baby
What's happening to my baby?
How much is the bill going to be?

Keeping baby warm/ safe

 DESCRIBE A PERSON USING EMPATHETIC LANGUAGE

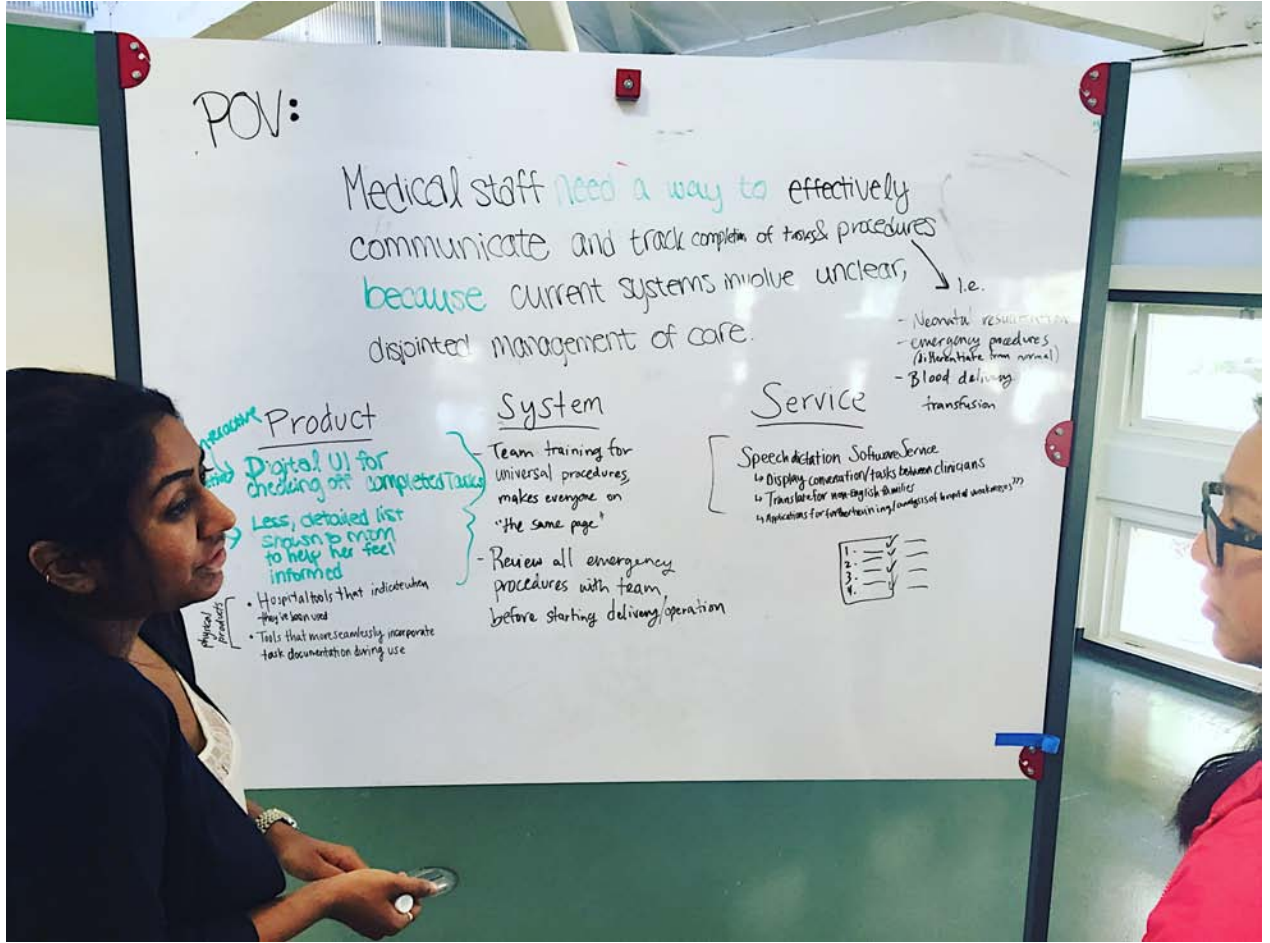

NEEDS A WAY TO

NEED

 NEEDS ARE VERBS

BECAUSE

INSIGHT

Create a “How Might We” ...statement.

How might we help Danika to do X in order for Y to happen...

**Your How Might We should generate a number of possible answers and will become a launch-pad for your brainstorm. “How Might We...” should give you both a narrow enough frame to let you know where to start your brainstorm, but also enough breadth to give you room to explore wild ideas.*

AUGMENTED w VOICE-ACTION
PAIRED w EQUIPMENT/TOOLS ON CART,
BAKRI

USABILITY

check chart to inform likely outcomes + prep beforehand

USE

Manuals are read at real time?

Equipment that is self-explanatory

6 CALLS (1 WIFE) (101)

Synthesis + training

New system & nurses cannot put it together - nurse might make a year.

SINGLE POINT OF FAILURE

WHAT'S HAPPENING?

Not only affects doctor also the whole process

PATIENT STAYS - DEMANDS - COMPLAINTS

FEAR - IS THIS WORKING?

building on existing mental model

MEANING

WHAT'S BASIS FOR CHANGE IN DESIGN?

Intuitive design vs training

PAD SEPARATE ORDER TO PAIR w BALLOON

Blood

CALL FOR BLOOD (2 L) (MTG)

INFO AG'D TO CALL MTG

MEASURING BLOOD ACCURACY?

BLOOD

Complicated blood machine. Why so difficult?

DIC (clotting) => How to DETERMINE

inter-department communication

FEELING OF HELPLESSNESS - NO BLOOD! => DYING PATIENT

LOSS OF CONTROL -> HELPLESS

long term frustration

Communication

"this is a real problem" Someone to explain what is going on

How MUCH BLOOD LOST?

"GIVE BACK" BLOOD PROGRAM

low guess on

materials + organization

bringing more than needed (Supplies)

easy access to materials (organized)

checklist

layout maps to process - highlight updates

color coded by step - Red team grouping supporting parts

After surgery reflection

What was missing?

huge waste of time in emergency

questioning of decisions - am I doing this right?

DID I MISS ANY PT

Continuous mistakes time after time

disrupt final concentration

Medication does not appear organized

VOICE-ACTIVATED CHECKLISTS ON TX & CLERKS

before narrative After

CHECKLIST KEEPING TRACK

USE TRACK BY HOW MANY TIMES

tracking vital signs progress

A L P S

having to think through in real time (not automated)

Roles + Coordination

SUPPORT REQUIRED FOR DOCTOR?

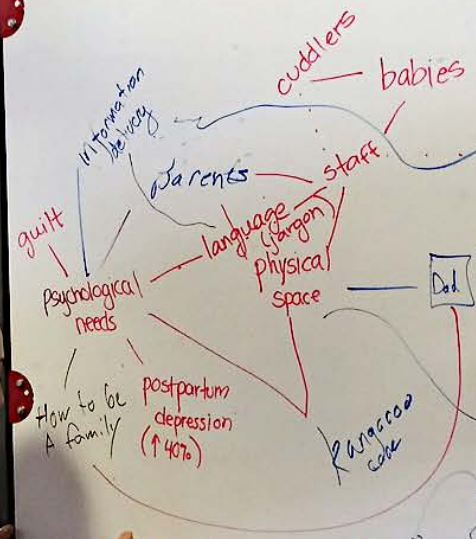

Young doc long & thin person who says they need a second line - call for blood

Knowing health record ahead of time

place to rest the baby when

Research → practice
"connection"
families
twins?
how to cause implementation
Keeping babies together for "social" reasons

Community?
staff
infection?
innovative incubators

structural flexibility
no perfect NICU

parent training
"LAPE"
help nurses practice
acclimating training parents to cords etc.
